

Killian Louis Grant

Technical Strategy & Leadership

Denver, CO • +1 (720) 231-9248 • killian@killiangrant.com • linkedin.com/in/killianlgrant • github.com/nailliK

Engineering leader and solutions architect with 15+ years guiding replatforming and modernization efforts across regulated and operationally complex products. Owns technical strategy from discovery through delivery: aligning executives and stakeholders, defining target-state architecture, shaping roadmaps, de-risking migrations, and enabling teams to ship predictably. Hands-on across TypeScript/Node and React ecosystems, cloud architecture, data platforms, and integration-heavy systems.

Skills

Leadership and Delivery

- **Replatforming strategy:** target-state architecture, migration planning, sequencing, risk management, operational readiness
- **Solutioning and scoping:** discovery, estimation, statements of work, delivery planning with sales and client partners
- **Delivery systems:** prioritization, dependency management, release predictability, quality gates
- **People leadership:** mentoring, coaching, standards, performance management, career growth
- **Stakeholder leadership:** executive alignment, cross-functional decision-making, clear tradeoffs, durable roadmaps

Technical

- **Cloud/Deploy:** AWS (EC2, Lambda, S3, RDS, IAM, CloudFront, ECS), GCP (Cloud Run, BigQuery, Cloud Storage), CI/CD (GitHub Actions, Jenkins)
 - **Architecture:** REST, event-driven, microservices, messaging, RPC, authorization/RBAC, distributed systems boundaries
 - **Full-Stack:** TypeScript/Node, React/Next, Vue/Nuxt, Svelte/SvelteKit, Python, Rust
 - **Data:** MySQL, PostgreSQL, Redis, ETL pipelines, performance tuning, GraphQL
 - **AI/LLM:** summarization, categorization, safety controls, workflow automation, developer tooling
-

Experience

DrWell

Senior Software Engineering Manager | Dec 2024 – Jan 2026

- Served as technical lead for a multi-tenant product platform, owning core architecture, data models, and cross-cutting system concerns.
- Managed, mentored, and supported engineers through architectural guidance and day-to-day technical decision-making.
- Defined and evolved shared platform foundations, including access control, auditability, and configuration-driven workflows.
- Provided hands-on technical direction through design reviews, code review, and targeted implementation to set quality and consistency standards.
- Partnered closely with product to translate requirements into clear technical approaches, surfacing tradeoffs and risks early.

TheKey

Senior Technical Director | Dec 2023 – Sep 2024

- Shipped LLM-based shift note summarization for the family app, standardizing tone and structure to improve trust in caregiver updates.
- Increased engagement from 2,500 to 3,000 monthly users over three months by improving clarity and presentation of family-facing notes.
- Built an LLM-driven quality-of-care sentiment and categorization workflow to flag unsafe or inappropriate content for manager review, reducing review time from 8 hours to 1 hour per week.
- Streamlined third-party data ingestion and ETL pipelines, increasing processing throughput from 12,000 to 36,000 records per minute over six months.
- Partnered with the Head of Product and Product Owners to define scope, sequence delivery, and align tradeoffs across caregiver app, family app, and backend platforms.

Codelab303

Senior Technical Lead | Mar 2023 – Sep 2023

- Led delivery of a subscription platform replatform for a national restaurant chain, increasing subscriptions 25% over nine months.
- Replatformed the product outside of WooCommerce, improving security and flexibility across subscription and payment options.
- Migrated the team from WordPress to a headless CMS using reusable content modules and GraphQL queries, increasing productivity 11%.
- Drove stakeholder alignment on scope, milestones, and tradeoffs to keep delivery predictable across multiple workstreams.

Kin + Carta

Principal Architect | Dec 2021 – Mar 2023

- Led architecture and delivery across enterprise client engagements, translating business constraints into scoped plans and predictable releases.
- Delivered an online bulk purchasing platform for a global agricultural sciences company, replacing a phone-based process used by distributors and large-scale farms.
- Built distribution workflows for complex sell-to and ship-to relationships (multi-location clients, packaging options), reducing purchasing effort from hours to minutes.
- Delivered a recommendation engine for a global furniture and home goods company, increasing engagement 15% and recommendation-based purchases 11%.
- Improved delivery speed and reduced release friction through deployment automation workflows, increasing operational efficiency 5%.

InteliVideo

Senior Front-End Technical Lead | Jul 2020 – Dec 2021

- Led front-end modernization of a video-on-demand streaming platform for the health and wellness industry.
- Re-architected the subscriber experience to improve usability and enable faster iteration on member-facing features.
- Established front-end standards and review practices to improve code quality and reduce regressions.
- Provided technical leadership through planning support, implementation guidance, and unblock and ship ownership across the team.
- Improved delivery consistency by aligning patterns, workflows, and expectations across contributors.

Techtonic

Director, Apprenticeship Instruction and Development | Jan 2020 – Jul 2020

- Rebuilt the apprenticeship curriculum to align training outcomes with real client delivery expectations.
- Designed and implemented new course tracks and materials to close gaps between bootcamp fundamentals and production work.
- Established evaluation and feedback loops for apprentices to improve readiness, ownership, and delivery confidence.
- Guided the program through COVID disruption, adapting structure and delivery while maintaining quality standards.
- Partnered with internal stakeholders to anticipate client needs and translate market shifts into curriculum priorities.

Fruition

Director of Engineering | Jul 2018 – Jan 2020

- Led multidisciplinary delivery teams and improved execution through clearer scoping, streamlined QA, and tighter cross-functional handoffs.
- Architected a machine learning-backed customer engagement engine for healthcare, increasing return visits 30% through journey tracking and tailored messaging.
- Partnered with business development on technical solutioning and statements of work, improving estimate accuracy 25% and increasing revenue 8% with a scoping risk modifier.
- Built a reusable front-end framework that accelerated delivery of content and marketing sites while improving consistency and maintainability.
- Coached leads and senior engineers on planning, standards, and delivery practices to increase ownership and reduce rework.

Monigle

Technical Director | Jul 2017 – Sep 2018

- Led engineering, QA, and ops for a platform modernization effort, owning delivery plans, technical direction, and release readiness.
- Replatformed a single-tenant product into a multi-tenant SaaS platform, improving availability from frequent downtime to sustained 99% uptime.
- Built a theming approach that reduced custom build effort and shortened client onboarding cycles.
- Delivered a CMS workflow that shifted content changes from engineering-owned releases to client-managed updates.
- Established engineering standards and operating practices that improved consistency across teams and reduced production issues.

Spire Digital

Director of Engineering | Oct 2013 – Jul 2017

- Established and grew the engineering department from 5 to 50, building hiring, onboarding, and development pathways for leads and managers.
- Partnered with product leadership to implement a Lean and Agile delivery system, improving ownership, visibility, and predictability across teams.
- Set and enforced engineering standards and best practices to improve quality, maintainability, and delivery consistency.
- Built cross-functional operating rhythms that improved collaboration between engineering, QA, ops, and product.
- Coached leaders across engineering, QA, and ops to strengthen execution, accountability, and team health.
